Name: Dhairay
Registration Number: *25MEI10071*
Branch: Int.Mtech
Year: 1st Year Int.MTech
Course Code: CSE0001
Course Title: Digital Literacy
Date: *31/03/2026*

---

1. Introduction :

In today's digital age, being digitally literate is essential for students to succeed academically and professionally. This project, assigned as part of the Digital Literacy course, focuses on building awareness and practical skills related to online tools, communication, and cybersecurity. As a Student Digital Ambassador, the objective was to create a portfolio that demonstrates understanding of digital platforms, professional presence, and safe internet practices.

The project consists of five tasks, each covering different aspects such as infographic creation, building a digital portfolio, exploring coding platforms, understanding email etiquette, and studying cybercrime awareness. Through this project, I gained hands-on experience with various tools and developed a deeper understanding of responsible digital behavior.

---

2. Task 1 – Digital Literacy Infographic :

For this task, I created a one-page digital literacy infographic using Canva. The infographic covers key topics such as the meaning of digital literacy, safe internet practices, and useful digital tools for students. I used icons, colors, and simple layouts to make the content visually appealing and easy to understand.

The infographic explains how digital literacy helps students in communication, learning, and maintaining a professional online presence. It also highlights important safety tips like using strong passwords and avoiding suspicious links.

One interesting aspect of this task was learning how to present information visually instead of writing long text. Designing the layout in a way that is both informative and attractive was slightly challenging, especially deciding what content to include and how

to organize it. Overall, this task helped me improve my creativity and ability to communicate ideas effectively through design.

---

3. Task 2 – Student Digital Portfolio :

In this task, I created and updated my profiles on platforms such as GitHub, LinkedIn, and *(mention one more if you used)*. These platforms are important for building a professional online identity and showcasing skills.

On GitHub, I created a profile README that includes my name, branch, and learning goals. GitHub is useful for sharing projects and collaborating with others. On LinkedIn, I updated my education details, which helps in networking with professionals and finding internship opportunities.

These platforms serve different purposes. GitHub is mainly used for coding and project work, while LinkedIn is used for professional networking. Over the next four years, I plan to regularly update my profiles, upload projects, and connect with people in my field.

This task helped me understand the importance of maintaining a professional digital presence and how it can impact future career opportunities.

---

4. Task 3 – Coding & Collaboration Platforms :

For this task, I explored both coding platforms and collaboration tools. I created an account on *(HackerRank / CodeChef)* and completed a beginner-level coding challenge. This helped me understand basic problem-solving and programming concepts.

Additionally, I created a Google Form titled “Digital Literacy Awareness Quiz” consisting of five questions. The form included both multiple-choice and short-answer questions. I also viewed responses using Google Sheets, which showed how data can be collected and analyzed efficiently.

These tools are extremely useful in academics. Coding platforms help improve logical thinking and programming skills, while Google Forms can be used for quizzes, surveys, and feedback collection.

Through this task, I learned how technology can simplify collaboration and learning. It also gave me confidence to explore more platforms in the future.

---

5. Task 4 – Email Etiquette:

In this task, I wrote two professional emails—one requesting an assignment extension and another applying for an internship. I ensured that both emails included proper subject lines, greetings, structured content, and polite sign-offs.

I also created a Social Media Do's and Don'ts checklist to promote responsible online behavior among students.

A situation where poor digital communication can cause problems is when a student sends an email without a subject line or uses informal language while communicating with a professor. This can create a negative impression and may lead to misunderstandings. Such situations can be avoided by following proper email etiquette, maintaining a respectful tone, and clearly stating the purpose of communication.

This task helped me understand the importance of professional communication in academic and professional environments.

---

6. Task 5 – Cybercrime Awareness :

For this task, I studied a cybercrime case related to *(Phishing / UPI Fraud)*. I learned how attackers trick users into sharing sensitive information such as passwords or OTPs. These crimes often target students and individuals who are not aware of online threats.

One surprising aspect was how easily people can fall victim to such scams due to lack of awareness. Even a small mistake like clicking on a fake link can lead to serious consequences.

As a result of this task, I will be more cautious while using the internet. I will avoid sharing personal information, verify links before clicking, and use secure payment methods. I also created a prevention checklist to help others stay safe online.

---

7. Conclusion :

This project provided valuable insights into the importance of digital literacy. It helped me understand how to use digital tools effectively, maintain a professional online presence, and communicate responsibly. I also gained awareness about cyber threats and how to prevent them.

Overall, this project enhanced my technical skills, creativity, and awareness of safe digital practices. These skills will be useful not only during my academic journey but also in my future career.
